

Main objectives

C@RE AUGMENTED LEARNING APPROACH FOR PERSONAL CARE

About the project

C@RE aims to support the care system by creating a model that involves the acquisition of the new skills requested by the labor market (basic digital and relational & emotional management skills), using Augmented Reality (AR) as a key tool for digitizing learning pathways. These competences will be included in the C-VET programmes using digital tools to renew this sector towards digitisation of the courses offered.

General Objective

Digitally requalify workers in the field of personal and social care by creating a **model that provides for the acquisition of relevant skills** (new digital and relational & emotional management skills) through **augmented learning and facilitates workplace learning** through digital tools.

Specific objectives

Support the **upskilling of social and care workers' competence** toward digitalization of the care sector.

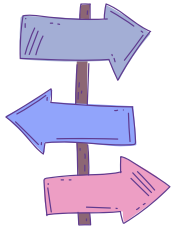

To promote the use of **Augmented Learning** as a new and innovative learning technique in **training pathways for care and social workers**, where the environment adapts to the learner to gain a greater understanding of a topic by stimulating discovery and learning.

Providing digital tools to implement **new learning paths** in the vocational training sector.

Main Results

1. A **COMPETENCE FRAMEWORK** for personal care workers inspired by the demand of the new skills (digital and relational & emotional management skills) to meet the actual care sector's needs.

2. A **TRAINING COURSE** based on learning scenarios to motivate and trigger a problem-based learning approach in care workers.

3. A **SOCIAL LEARNING MOTIVATIONAL PLATFORM** that will include training materials competences framework as well as augmented reality components.

TARGET GROUP

1. CARE WORKERS INVOLVED IN C-VET PATHS
2. EDUCATORS AND TEACHERS PROVIDING CONTINUING VET IN THE SECTOR OF PERSONAL CARE SERVICES
