

4° NEWSLETTER

C@RE Augmented learning approach for personal care

May 2025

C@RE: A farewell, but not a goodbye

We're almost there!

The project is approaching its end, and in this newsletter we would like to share with you the **latest results** achieved by the C@RE Consortium.

The **project will undoubtedly continue** to thrive thanks to all those who will use and share its results in the future.

Let's review the main results of the project

- **C@RE Competence Framework:** A **reference framework** for the skills required of new care workers, focusing on digital skills and emotional management, and a **self-assessment questionnaire** for social and care workers to test their skill level (*Work Package 2*).
- **C@RE Training Course:** development of **interactive training contents** based on the framework developed in WP2 (*Work Package 3*).
- **C@RE Social Learning Motivational Environment:** an **e-learning platform** that integrates training materials and AR simulations to help social and care workers improve key skills (*Work Package 4*).

C@RE FINAL TPM

On **24 April 2025**, the **final TPM of the C@RE project** was held in Milan, hosted by partner **European Digital Learning Network ETS**.

Meetings discussion

The partners:

- Reviewed the status of the project activities;
- Discussed the latest tasks;
- Addressed how to support the project after its completion.

Everyone collaborated actively and proactively to deliver a project of great value that will help the care and social work sectors acquire and improve the skills they need.

Last Phases

B Currently, the partners of the C@RE project are
E completing the **beta testing phase of the Social**
T Learning Motivational Environment.

A In this phase, the developed content is being tested by a selected group of
T end users (healthcare professionals, trainers, vocational education and
E training students) to gather feedback that will help improve the learning
S experience and optimise the technological tools. The results of this phase
T will be crucial for finalising the training materials and ensuring their
effectiveness and sustainability.

Final Conferences

The partners are currently **organising final conferences in their respective countries**. These events represent a key moment to present the project results, share good practices and preview the learning platform and content developed. The conferences will involve stakeholders from the social care sector, training institutions, policy makers and the interested public, with the aim of raising awareness of the products developed within the project and promoting their adoption.

MoUs

Finally, with the project coming to an end, the partners are also working on signing **memoranda of understanding (MoUs)** with vocational training institutions, social and healthcare organisations, and educational institutions. Although not binding, these agreements will enable the partners to establish networks of institutions and organisations committed to promoting and using the C@RE model, ensuring that the resources released by the project continue to be used. The MoUs are a **concrete tool for ensuring the sustainability and long-term impact of the project's results**.

**Co-funded by
the European Union**

Funded by the European Union. Views and opinions expressed are however those of the author(s) only and do not necessarily reflect those of the European Union or the National Agency. Neither the European Union nor the National Agency can be held responsible for them. "C@RE agmented learning approach for personal care", project number: 2022-1-LT01-KA220-VET-000086933.

Finally, we would like to remind you that the European Union co-funded the C@RE project as part of the Erasmus+ programme. This support has enabled us to develop all the products that will be made available free of charge to anyone interested in adopting innovative and inclusive training solutions for the care sector, thus contributing concretely to the digitisation of vocational training and the strengthening of care workers' skills in Europe.
