C@RE Approccio di apprendimento aumentato per la cura della persona

Marzo 2025

CORSO DI FORMAZIONE C@RE

I partner hanno lavorato alle attività per la creazione di un **percorso formativo completo (Work Package 3)**, progettato per fornire agli operatori del settore assistenziale le competenze necessarie per affrontare le **sfide professionali più attuali**. I contenuti del corso derivano direttamente dal Competence Framework, così da garantire coerenza con le reali esigenze del mercato del lavoro.

Il materiale didattico è stato sviluppato in formato video interattivo, per rendere l'apprendimento coinvolgente e facilmente applicabile nella pratica quotidiana.

WP3

How should Rita proceed?

A) Move on to another activity - music therapy - to help bring back memories, assuming the photo has no meaningful effect.

B) Encourage Mr. Jonas to share memories and feelings about the photo.

GO BACK

Il corso affronta:

- **Competenze digitali**, per l'uso efficace delle nuove tecnologie nel lavoro di cura;
- **Capacità relazionali ed emotive**, fondamentali nella gestione di situazioni complesse;
- **Competenze trasversali richieste dal mercato del lavoro**, con specifica attenzione ai contesti multiculturali e all'inclusione sociale.

WP4

C@RE SOCIAL LEARNING MOTIVATIONAL ENVIRONMENT

The C@RE project is moving towards **Work Package 4 (WP4)**, a fundamental stage dedicated to the **development of innovative tools for the training of social and health workers**.

During WP4, the consortium has worked intensively to translate the results of the previous work packages into concrete, digital and easily accessible tools that can respond to the increasingly complex challenges of the care sector.

Objectives

- **Aligning professional training** with the real needs of the labour market, offering up-to-date and relevant training courses.
- **Promoting the digital transition of the sector**, through tools that favor the acquisition of technological skills and the reduction of inequalities, with particular attention to the most vulnerable workers (for example, women and migrants).
- **Innovating experiential training**, thanks to the use of augmented reality to simulate complex professional scenarios.

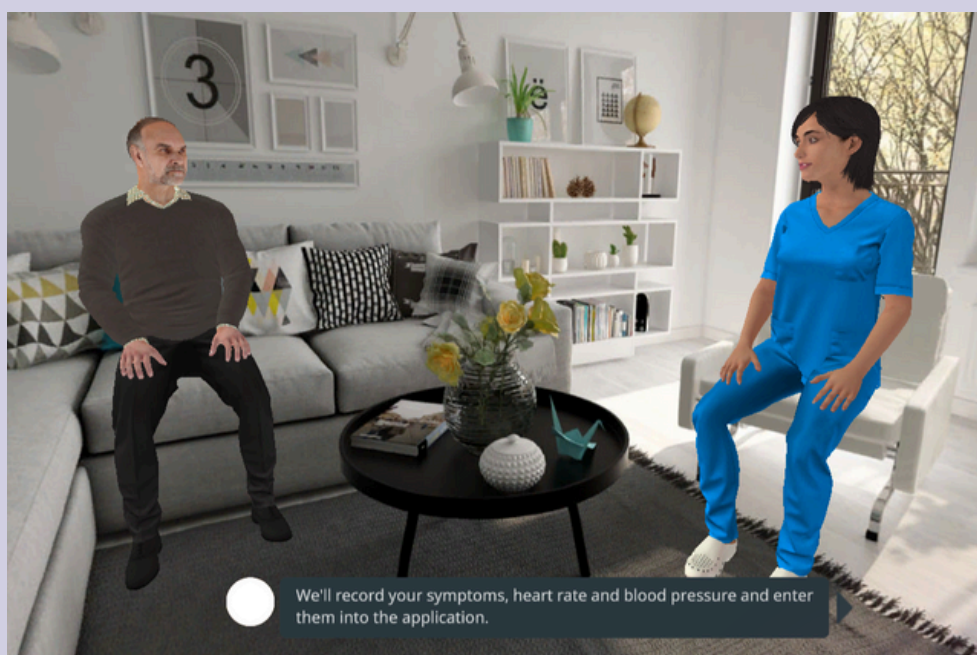

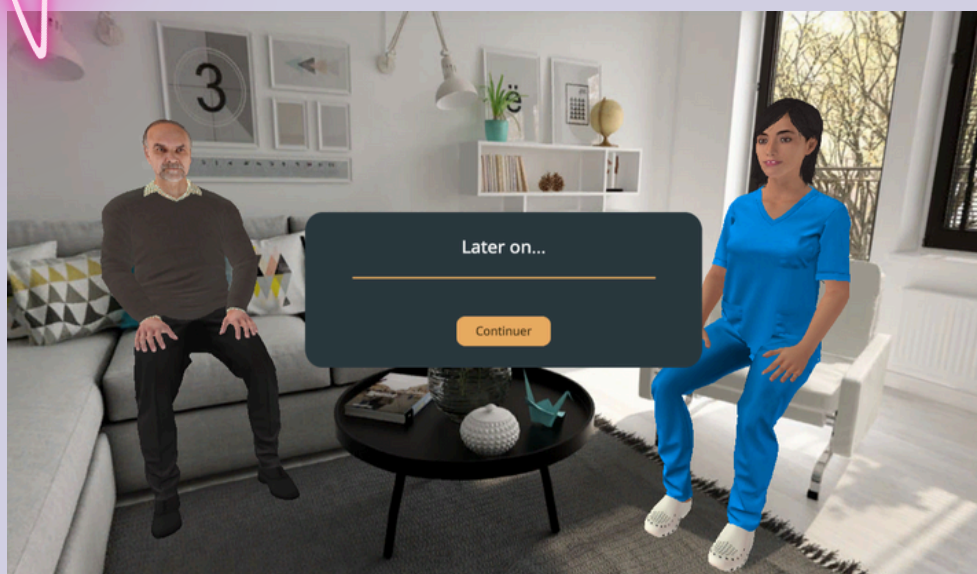

The activities of WP4 will lead to the creation of two main results:

1. An **ONLINE LEARNING PLATFORM**, based on Moodle, which brings together the interactive training content developed during the project. The platform is designed to host multimedia courses, innovative teaching materials and personalised pathways, with a system for recognising skills using Open Badges.

2. The **Augmented Care Demonstrator Tool**, a tool based on augmented reality that allows the simulation of realistic professional scenarios, offering care sector operators a safe and stimulating environment in which to practise and develop practical, digital and interpersonal skills.
